Summary

How many pets do you have? What kind of pets have you ever had? Can you briefly describe your pets?

Two pets. One is mice, and the other is a dog.

My 3 year old Pomeranian has golden hair, black pearl like eyes with a tail resting on its back. It is fluffy and small, around 4kg and 20 centimetres long. Loves wagging his tail whenever he sees familiar people but barks fiercely when seeing strangers.

Any experience that you've lost your pet?

No

Can you Imagine a situation, if you lost your pet, what kind of methods might you use to find your pet?

The method that I can come up with right now is maybe I would create a post online via social media (FB or IG) or make an advertisement of pet finding and ask the passengers.

Also, someone who found the lost pets might also post on social media.

If we want to design an app to help users find their lost pet (show the graph and introduce her our prototype), what do you think of our prototype?

The idea is good if this kind of app can be developed. Three aspects she worried about.

- The coverage or prevalence rate of this app.
    - If I uploaded the photos to the app, and not so many people use it, it might not be so helpful for me to find the dog. So not only the pet owner need this app, other people might also need it.

- Efficiency of the app

- ○ It might be helpful if you can guarantee that if someone finds the lost pet, they would post on the app.

- Concern about the leakage of personal information
  - ○ It might contain contact information including address or phone number.

What kind of information do you expect to gain from our prototype?

- Contact information (location), where and when others find the lost pets
